Wideband Coupler

G&H's Wideband Coupler provides new levels of performance and reliability for two-window couplers. The coupler enables coupling and splitting simultaneously over the 1310nm and 1550nm windows.

Within optical networks the ultra-low insertion loss of the Wideband Coupler makes it easier to meet stringent optical power budgets. Furthermore the component is designed for high reliability and low FIT rates, through robust fusion and advanced component packaging.

Components are available in a variety of package styles to suit a wide range of applications, including optical networking. Wavelengths other than 1310/1550nm are also available as a custom product. Please contact us to discuss your specific requirements.

Key Features:

- 1310 and 1550nm operation
- High performance
- ± 20 nm bandwidth in each window
- Consistently reliable
- Low loss

Applications:

- Optical networking
- Passive optical networks
- CATV
- Undersea systems

1. Insertion loss over operating wavelength range (not including PDL, TDL or any connector losses),
2. In 2x2 couplers insertion loss is not specified for launch through second input port P4 (coloured blue)
3. Change in insertion loss over all input polarisation states at band centre wavelength
4. Any coupling ratio available – contact G&H for specification of coupling ratios not listed.

Parameter	Specification	Unit	
Operating Wavelength Range	1310/1550nm	1310±20 and 1550±20	nm
Return Loss/Directivity ₁	55		dB
Pigtail Tensile Load	5		N
Optical power handling _{3,4}	4		W
Operating Temperature Range ₂	-40 to +75		°C
Storage Temperature Range	-40 to +85		°C

1. Return loss is the ratio of power launched to power reflected for port P1. Directivity for the 2x2 component is the ratio of power launched to P1 to the power reflected to P4.
2. For connectorised component, operating temperature range is –5 to +75°C.
3. For operation at powers of greater than 4W the component housing and fibre must be adequately heat-sunk (for additional information contact G&H Sales). Components intended for high power operation are only available in the 2x2 configuration. Component performance and reliability under high power must be determined within the customer system.
4. The performance and reliability of optical connectors is not guaranteed for optical powers of greater than 1W.
