### 1.0 Optical and Operation Specifications

Item	Specifications	Min.	Тур.	Max.	Unit	Notes
1.01	Laser wavelength	1075	1080	1085	nm	At T=T <sub>N</sub>
1.02	Laser linewidth	1.0			nm	
1.03	Pump wavelength	908	915	928	nm	At $T=T_N$ , CW regime
1.04	Polarization		Ran	dom		
1.05	Operation regime		C	W		
1.06	Warm-up time			30	min	Within 2% after 1min
1.07	Optical power stability			±1	%	At constant T and P=P <sub>max</sub> over 1h

### Power and input ports options

#### 6.0 Mechanical specifications and drawings

#### 7.0 Product Data Report - supplied with every unit

Item	Data											
7.1	Optical-Optical Effici	Optical-Optical Efficiency										
7.2	Beam quality	$M^2$	For Bare fiber or 25/400 um QBH output options									
/.2	Dealli quality	BPP	For 50/360 um or 100/360 um QBH output options									

#### 8.0 Additional features

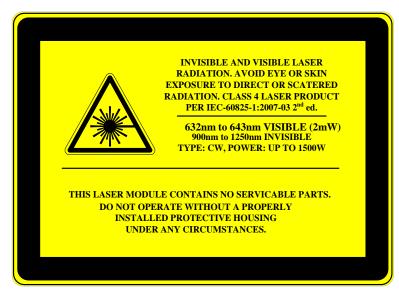

Item	Note								
8.1	The Laser Engine is protected against backreflected signal during operation.								
0.1	Do not operate without proper high power termination (QBH cable, for example)								
0.2	The output beam of multiple Laser Engines can be combined.								
8.2	Laser beam combiners are currently being developed by ITF, contact us for more details.								
8.3	Pump diodes electrical drivers not included.								

Note: See Operation Insctructions documents for more details and features

#### 9.0 Safety and specific precautions

Item	Note
9.1	This laser engine is a laser component that does not include all safety features as required by IEC-60825-1:2007-03 2 <sup>nd</sup> edition sections 4.3 to 4.12 for laser systems, as defined by section 3.48. The end product manufacturer has the responsibility to provide the necessary features to meet compliance level as required by relevant national regulations.
9.2	For your safety, never open the protective housing (case). Warranty is void if case is opened.
9.3	The module's case temperature must be maintained within the range specified in the environmental specifications section at all times. Its entire bottom surface MUST be appropriately heat sinked and its case temperature can be monitored using the built-in thermistors. A room temperature, power off, calibration is recommended. See OLE Aplication Note for more details.
9.4	To avoid irreversible damage and loss of power, fiber terminaisons (connectors, collimators) must remain perfectly clean and scratch free.
9.5	The laser engine module case is not ESD or EMI sensitve.
